

Take Back Control of your Field Construction Programs

- **Real-Time Visibility into Field Activities**
- **Daily Updates on Project Progress and Spend**
- **Improve Coordination across the organization**
- **Minimize Risk with Enhanced Planning Tools**
- **Operational and Financial Dashboards**

Improve your Field Productivity by 30%

Improve Organization Alignment with Integrated Workflows

Completing projects on time requires project managers, field crews, warehouse managers and finance to work off the same playbook. With FieldCLIX integrated workflows, all departments are working in tight coordination, which minimizes errors, reduces delays and helps manage an increased volume of work.

Maximize Field Productivity with Dynamic Dispatch Management

Field labor is your biggest cost and productive time on site the key challenge. FieldCLIX helps optimize the scheduling of your field crews, notifies when crews arrive on site, generates timecards (via GPS tracking) that depicts accurate movements during the day and provides updates on tasks as they are completed.

Increase Profits with Real-Time Job Costing

Monthly accounting reports aren't sufficient for job costing when many projects are completed in less than two weeks. FieldCLIX lets you establish a target budget for each project and automatically updates labor, material, and vendor costs daily to help keep you on track to hit your target margins.
